

## Nachhaltigkeit – Unsere zentralen Handlungsfelder - Sustainability – Our Key Fields of Action

April 2026

Dear Sir or Madam,

**Sustainability, quality, and responsible corporate governance** are firmly embedded in WSS's corporate philosophy. In light of increasing ESG requirements, we have continuously and strategically further developed our corporate orientation over recent years and consistently expanded our existing structures.

WSS has been certified according to **ISO 9001** since 1998. This certification demonstrates our high quality standards and our consistent alignment of processes toward customer satisfaction.

As part of our extended corporate and sustainability strategy, we have successfully built upon this foundation and are now additionally certified according to **ISO 14001** (Environmental Management) and **ISO 50001** (Energy Management). These certifications form a structured framework for our responsible use of resources, efficient utilization of energy and operating materials, and transparent waste management. We pursue a systematic approach to the **continuous reduction of environmental impacts** and the ongoing introduction and **optimization of internal material and waste cycles**.

Our actions are consistently aligned with **applicable legal requirements**, which are an integral part of our management systems. Relevant legal and normative requirements are regularly identified, evaluated, and monitored. In addition, within the scope of our product and process responsibility, we continuously review requirements arising from regulations such as **REACH** and **RoHS** to ensure material compliance and product safety throughout the value chain and to meet the expectations of our interested parties.

In the interest of transparent collaboration, we provide our **sustainability scope** and relevant company information via established platforms such as **EcoVadis** and **IntegrityNext**. This enables interested parties to conduct a transparent and comprehensible assessment of our sustainability maturity.

Furthermore, our values and principles of responsible corporate governance are firmly embedded internally, including within our **Code of Conduct**. They provide a binding framework for ethical, sustainable, and cooperative behavior.

This concise overview is intended to give you an initial insight into how we understand ESG, sustainability, and quality, the strategic approach we derive from this understanding, and our current activities.

p.p. **Julian Skopp**
